

# TXB0102 2-Bit Bidirectional Voltage-Level Translator With Auto Direction Sensing and $\pm 15$ -kV ESD Protection

## 1 Features

- Available in the Texas Instruments NanoFree™ Packages
- 1.2 V to 3.6 V on A Port and 1.65 V to 5.5 V On B Port ( $V_{CCA} \leq V_{CCB}$ )
- $V_{CC}$  Isolation Feature – If Either  $V_{CC}$  Input Is at GND, All Outputs Are in the High-Impedance State
- OE Input Circuit Referenced to  $V_{CCA}$
- Low Power Consumption, 4- $\mu$ A Max  $I_{CC}$
- $I_{off}$  Supports Partial-Power-Down Mode Operation
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Protection Exceeds JESD 22
  - A Port
    - 2500-V Human-Body Model (A114-B)
    - 200-V Machine Model (A115-A)
    - 1500-V Charged-Device Model (C101)
  - B Port
    - 15-kV Human-Body Model (A114-B)
    - 200-V Machine Model (A115-A)
    - 1500-V Charged-Device Model (C101)

## 2 Applications

- Handsets
- Smartphones
- Tablets
- Desktop PCs

## 3 Description

This 2-bit noninverting translator uses two separate configurable power-supply rails. The A port is designed to track  $V_{CCA}$ .  $V_{CCA}$  accepts any supply voltage from 1.2 V to 3.6 V. The B port is designed to track  $V_{CCB}$ .  $V_{CCB}$  accepts any supply voltage from 1.65 V to 5.5 V. This allows for universal low-voltage bidirectional translation between any of the 1.2-V, 1.5-V, 1.8-V, 2.5-V, 3.3-V, and 5-V voltage nodes.  $V_{CCA}$  should not exceed  $V_{CCB}$ .

When the output-enable (OE) input is low, all outputs are placed in the high-impedance state.

This device is fully specified for partial-power-down applications using  $I_{off}$ . The  $I_{off}$  circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

To ensure the high-impedance state during power up or power down, OE should be tied to GND through a pulldown resistor; the minimum value of the resistor is determined by the current-sourcing capability of the driver.

NanoFree™ technology is a major breakthrough in IC packaging concepts, using the die as the package.

### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TXB0102	SSOP (8)	2.95 mm x 2.80 mm
	VSSOP (8)	2.30 mm x 2.00 mm
	DSBGA (8)	0.90 mm x 1.80 mm

(1) For all available packages, see the orderable addendum at the end of the datasheet.

## 5 Pin Configuration and Functions

- Pullup resistors are not required on both sides for Logic I/O.
- If pullup or pulldown resistors are needed, the resistor value must be over 50 k $\Omega$ .
- 50 k $\Omega$  is a safe recommended value, if the customer can accept higher  $V_{OL}$  or lower  $V_{CCOUT}$ , smaller pullup or pulldown resistor is allowed, the draft estimation is  $V_{OL} = V_{CCOUT} \times 4.5k/(4.5k + R_{pu})$  and  $V_{OH} = V_{CCOUT} \times R_{dw}/(4.5k + R_{dw})$ .
- If pullup resistors are needed, please refer to the TXS0102 or contact TI.
- For detailed information, please refer to application note [SCEA043](#).

### Pin Functions: YZP

PIN			TYPE <sup>(1)</sup>	DESCRIPTION
BALL	NO.	NAME		
A1	1	B2	I/O	Input/output B. Referenced to $V_{CCB}$ .
A2	5	B1	I/O	Input/output A1. Referenced to $V_{CCA}$ .
B1	2	GND	S	Ground
B2	6	$V_{CCB}$	I	3-state output-mode enable. Pull OE low to place all outputs in 3-state mode. Referenced to $V_{CCA}$ .
C1	3	$V_{CCA}$	S	A-port supply voltage. $1.1\text{ V} \leq V_{CCA} \leq 3.6\text{ V}$ , $V_{CCA} \leq V_{CCB}$
C2	7	OE	S	B-port supply voltage. $1.65\text{ V} \leq V_{CCB} \leq 5.5\text{ V}$
D1	4	A2	I/O	Input/output A2. Referenced to $V_{CCA}$ .
D2	8	A1	I/O	Input/output B1. Referenced to $V_{CCB}$ .

(1) (1) I = input, O = output, I/O = input and output, S = power supply

### Pin Functions: DCT or DCU

PIN		TYPE <sup>(1)</sup>	DESCRIPTION
NO.	NAME		
1	B2	I/O	Input/output B. Referenced to $V_{CCB}$ .
2	GND	S	Ground
3	$V_{CCA}$	S	A-port supply voltage. $1.1\text{ V} \leq V_{CCA} \leq 3.6\text{ V}$ , $V_{CCA} \leq V_{CCB}$
4	A2	I/O	Input/output A2. Referenced to $V_{CCA}$ .
5	A1	I/O	Input/output A1. Referenced to $V_{CCA}$ .
6	OE	I	3-state output-mode enable. Pull OE low to place all outputs in 3-state mode. Referenced to $V_{CCA}$ .
7	$V_{CCB}$	S	B-port supply voltage. $1.65\text{ V} \leq V_{CCB} \leq 5.5\text{ V}$
8	B1	I/O	Input/output B1. Referenced to $V_{CCB}$ .

(1) (1) I = input, O = output, I/O = input and output, S = power supply

## 6 Specifications

### 6.1 Absolute Maximum Ratings<sup>(1)</sup>

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
V <sub>CCA</sub>	Supply voltage range		−0.5	4.6	V
V <sub>CCB</sub>	Supply voltage range		−0.5	6.5	
V <sub>I</sub>	Input voltage range <sup>(2)</sup>	A port	−0.5	4.6	V
		B port	−0.5	6.5	
V <sub>O</sub>	Voltage range applied to any output in the high-impedance or power-off state <sup>(2)</sup>	A port	−0.5	4.6	V
		B port	−0.5	6.5	
V <sub>O</sub>	Voltage range applied to any output in the high or low state <sup>(2) (3)</sup>	A port	−0.5	V <sub>CCA</sub> + 0.5	V
		B port	−0.5	V <sub>CCB</sub> + 0.5	
I <sub>IK</sub>	Input clamp current	V <sub>I</sub> < 0		−50	mA
I <sub>OK</sub>	Output clamp current	V <sub>O</sub> < 0		−50	mA
I <sub>O</sub>	Continuous output current			±50	mA
Continuous current through V <sub>CCA</sub> , V <sub>CCB</sub> , or GND				±100	mA

- (1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The input and output negative-voltage ratings may be exceeded if the input and output current ratings are observed.
- (3) The value of V<sub>CCA</sub> and V<sub>CCB</sub> are provided in the recommended operating conditions table.

### 6.2 Handling Ratings

			MIN	MAX	UNIT
T <sub>stg</sub>	Storage temperature range		−65	150	°C
V <sub>(ESD)</sub>	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins <sup>(1)</sup> , A Port		2500	V
		Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins <sup>(1)</sup> , B Port	−15	15	kV
		Charged device model (CDM), per JEDEC specification JESD22-C101, all pins <sup>(2)</sup> , A Port		1500	V
		Charged device model (CDM), per JEDEC specification JESD22-C101, all pins <sup>(2)</sup> , B Port		1500	
		Machine model (MM,A115-A), A Port		200	
		Machine model (MM,A115-A), B Port		200	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions<sup>(1) (2)</sup>

			V <sub>CCA</sub>	V <sub>CCB</sub>	MIN	MAX	UNIT
V <sub>CCA</sub>	Supply voltage				1.2	3.6	V
V <sub>CCB</sub>					1.65	5.5	
V <sub>IH</sub>	High-level input voltage	Data inputs	1.2 V to 3.6 V	1.65 V to 5.5 V	V <sub>CCI</sub> × 0.65 <sup>(3)</sup>	V <sub>CCI</sub>	V
		OE input	1.2 V to 3.6 V	1.65 V to 5.5 V	V <sub>CCA</sub> × 0.65	5.5	
V <sub>IL</sub>	Low-level input voltage	Data inputs	1.2 V to 5.5 V	1.65 V to 5.5 V	0	V <sub>CCI</sub> × 0.35 <sup>(3)</sup>	V
		OE input	1.2 V to 3.6 V	1.65 V to 5.5 V	0	V <sub>CCA</sub> × 0.35	
V <sub>O</sub>	Voltage range applied to any output in the high-impedance or power-off state	A port	1.2 V to 3.6 V	1.65 V to 5.5 V	0	3.6	V
		B port			0	5.5	

- (1) The A and B sides of an unused data I/O pair must be held in the same state, i.e., both at V<sub>CCI</sub> or both at GND.
- (2) V<sub>CCA</sub> must be less than or equal to V<sub>CCB</sub> and must not exceed 3.6 V.
- (3) V<sub>CCI</sub> is the supply voltage associated with the input port.

## Recommended Operating Conditions<sup>(1) (2)</sup> (continued)

		$V_{CCA}$	$V_{CCB}$	MIN	MAX	UNIT
$\Delta t/\Delta v$	Input transition rise or fall rate	A port inputs	1.2 V to 3.6 V	1.65 V to 5.5 V	40	ns/V
		B port inputs	1.2 V to 3.6 V	1.65 V to 1.95 V	40	
				4.5 V to 5.5 V	30	
$T_A$	Operating free-air temperature			–40	85	°C

## 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		TXB0102			UNIT
		DCT	DCU	YZP	
		8 PINS			
R <sub>θJA</sub>	Junction-to-ambient thermal resistance	168.7	199.1	105.8	°C/W
R <sub>θJC(top)</sub>	Junction-to-case (top) thermal resistance	111.7	72.4	1.6	
R <sub>θJB</sub>	Junction-to-board thermal resistance	78.1	77.8	10.8	
Ψ <sub>JT</sub>	Junction-to-top characterization parameter	45.0	6.2	3.1	
Ψ <sub>JB</sub>	Junction-to-board characterization parameter	77.5	77.4	10.9	

(1) For more information about traditional and new thermal metrics, see the *IC Package Thermal Metrics* application report, [SPRA953](#).

## 6.5 Electrical Characteristics<sup>(1) (2)</sup>

over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	V <sub>CCA</sub>	V <sub>CCB</sub>	T <sub>A</sub> = 25°C			−40°C to 85°C		UNIT

## 6.17 Typical Characteristics

Figure 1. Input Capacitance for OE pin ( $C_i$ ) vs Power Supply ( $V_{CCA}$ )

Figure 2. Capacitance for A Port I/O Pins ( $C_{iO}$ ) vs Power Supply ( $V_{CCA}$ )

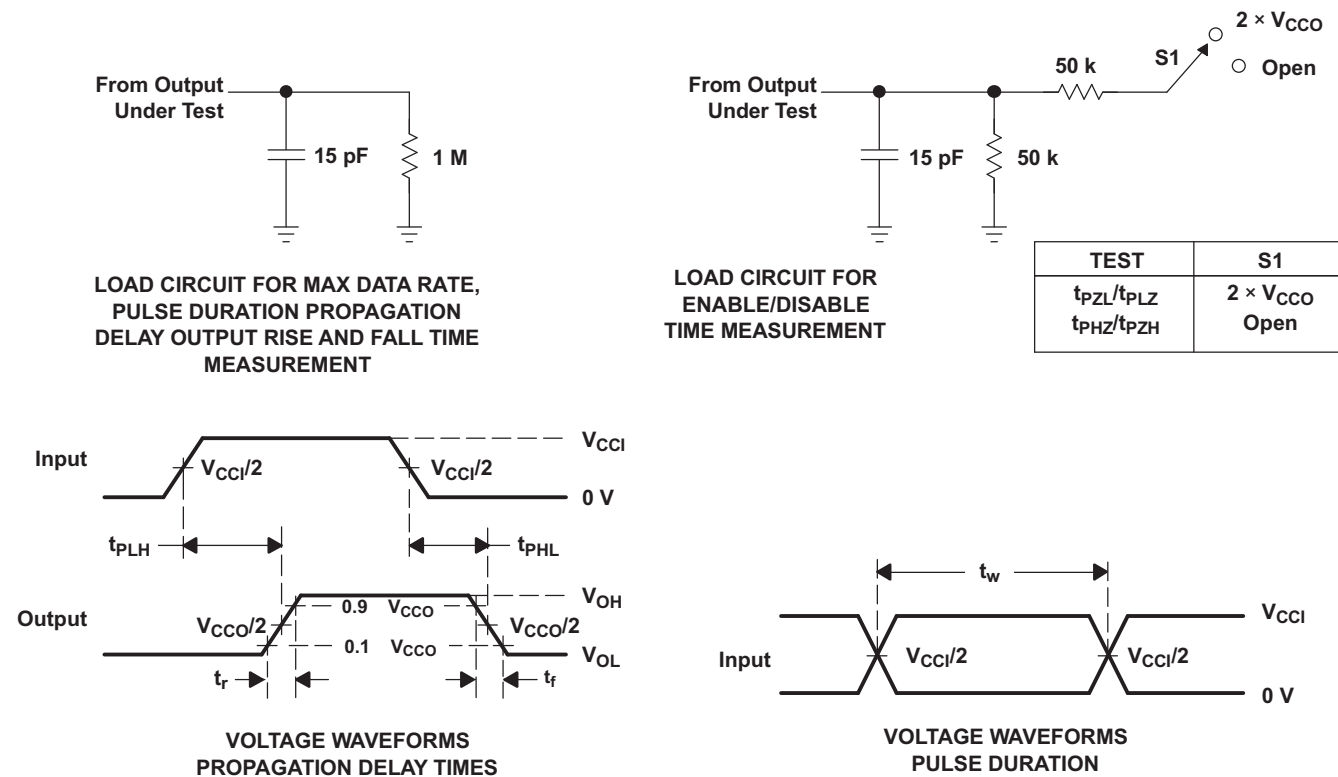

Figure 3. Capacitance for B Port I/O Pins ( $C_{iO}$ ) vs Power Supply ( $V_{CCB}$ )

## 7 Parameter Measurement Information

- A. C<sub>L</sub> includes probe and jig capacitance.
- B. All input pulses are supplied by generators having the following characteristics: PRR = 10 MHz, Z<sub>O</sub> = 50 Ω, dv/dt ≥ 1 V/ns.
- C. The outputs are measured one at a time, with one transition per measurement.
- D. t<sub>PLH</sub> and t<sub>PHL</sub> are the same as t<sub>pd</sub>.
- E. V<sub>CCI</sub> is the V<sub>CC</sub> associated with the input port.
- F. V<sub>CCO</sub> is the V<sub>CC</sub> associated with the output port.
- G. All parameters and waveforms are not applicable to all devices.

## 8.3 Feature Description

### 8.3.1 Architecture

The TXB0102 architecture (see [Figure 5](#)) does not require a direction-control signal to control the direction of data flow from A to B or from B to A. In a dc state, the output drivers of the TXB0102 can maintain a high or low, but are designed to be weak, so that they can be overdriven by an external driver when data on the bus starts flowing the opposite direction. The output one shots detect rising or falling edges on the A or B ports. During a rising edge, the one shot turns on the PMOS transistors (T1, T3) for a short duration, which speeds up the low-to-high transition. Similarly, during a falling edge, the one shot turns on the NMOS transistors (T2, T4) for a short duration, which speeds up the high-to-low transition. The typical output impedance during output transition is 70  $\Omega$  at  $V_{CCO} = 1.2$  V to 1.8 V, 50  $\Omega$  at  $V_{CCO} = 1.8$  V to 3.3 V and 40  $\Omega$  at  $V_{CCO} = 3.3$  V to 5 V.

Figure 5. Architecture Of TXB0102 I/O Cell

### 8.3.2 Input Driver Requirements

[Figure 6](#) shows the typical  $I_{IN}$  vs  $V_{IN}$  characteristics of the TXB0102. For proper operation, the device driving the data I/Os of the TXB0102 must have drive strength of at least  $\pm 2$  mA.

## Feature Description (continued)

**Figure 6. Typical  $I_{IN}$  vs  $V_{IN}$  Curve**

### 8.3.3 Output Load Considerations

TI recommends careful PCB layout practices with short PCB trace lengths to avoid excessive capacitive loading and to ensure that proper O.S. triggering takes place. PCB signal trace-lengths should be kept short enough such that the round trip delay of any reflection is less than the one-shot duration. This improves signal integrity by ensuring that any reflection sees a low impedance at the driver. The O.S. circuits have been designed to stay on for approximately 10 ns. The maximum capacitance of the lumped load that can be driven also depends directly on the one-shot duration. With very heavy capacitive loads, the one-shot can time-out before the signal is driven fully to the positive rail. The O.S. duration has been set to best optimize trade-offs between dynamic ICC, load driving capability, and maximum bit-rate considerations. Both PCB trace length and connectors add to the capacitance that the TXB0102 output sees, so it is recommended that this lumped-load capacitance be considered to avoid O.S. retriggering, bus contention, output signal oscillations, or other adverse system-level affects.

### 8.3.4 Enable and Disable

The TXB0102 has an OE input that is used to disable the device by setting OE = low, which places all I/Os in the high-impedance (Hi-Z) state. The disable time ( $t_{dis}$ ) indicates the delay between when OE goes low and when the outputs actually get disabled (Hi-Z). The enable time ( $t_{en}$ ) indicates the amount of time the user must allow for the one-shot circuitry to become operational after OE is taken high.

### 8.3.5 Pull or Pulldown Resistors on I/O Lines

The TXB0102 is designed to drive capacitive loads of up to 70 pF. The output drivers of the TXB0102 have low dc drive strength. If pullup or pulldown resistors are connected externally to the data I/Os, their values must be kept higher than 50 kΩ to ensure that they do not contend with the output drivers of the TXB0102.

For the same reason, the TXB0102 should not be used in applications such as I2C or 1-Wire where an open-drain driver is connected on the bidirectional data I/O. For these applications, use a device from the TI TXS01xx series of level translators.

## 8.4 Device Functional Modes

The TXB0102 device has two functional modes, enabled and disabled. To disable the device set the OE input low, which places all I/Os in a high impedance state. Setting the OE input high will enable the device.

## 9 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

The TXB0102 can be used in level-translation applications for interfacing devices or systems operating at different interface voltages with one another. It can only translate push-pull CMOS logic outputs. If for open drain signal translation, please refer to TI TXS010X products. Any external pulldown or pullup resistors are recommended larger than 50 kΩ.

### 9.2 Typical Application

**Figure 7. Typical Operating Circuit**

#### 9.2.1 Design Requirements

For this design example, use the parameters listed in [Table 1](#). And make sure that  $V_{CCA} \leq V_{CCB}$ .

**Table 1. Design Parameters**

DESIGN PARAMETER	EXAMPLE VALUE
Input voltage range	1.2 V to 3.6 V
Output voltage range	1.65 V to 5.5 V

#### 9.2.2 Detailed Design Procedure

To begin the design process, determine the following:

- Input voltage range
  - Use the supply voltage of the device that is driving the TXB0102 device to determine the input voltage range. For a valid logic high the value must exceed the  $V_{IH}$  of the input port. For a valid logic low the value must be less than the  $V_{IL}$  of the input port.
- Output voltage range
  - Use the supply voltage of the device that the TXB0102 device is driving to determine the output voltage range.
  - Don't recommend to have the external pullup or pulldown resistors. If mandatory, it is recommended the value should be larger than 50 kΩ.

- An external pulldown or pullup resistor decreases the output  $V_{OH}$  and  $V_{OL}$ . Use [Equation 1](#) and [Equation 2](#) to draft estimate the  $V_{OH}$  and  $V_{OL}$  as a result of an external pulldown and pullup resistor.

$$V_{OH} = V_{CCx} \times R_{PD} / (R_{PD} + 4.5 \text{ k}\Omega)$$

(1)

$$V_{OL} = V_{CCx} \times 4.5 \text{ k}\Omega / (R_{PU} + 4.5 \text{ k}\Omega)$$

where

- $V_{CCx}$  is the output port supply voltage on either  $V_{CCA}$  or  $V_{CCB}$
- $R_{PD}$  is the value of the external pulldown resistor
- $R_{PU}$  is the value of the external pullup resistor
- 4.5 k $\Omega$  is the counting the variation of the serial resistor 4 k $\Omega$  in the I/O line.

(2)

### 9.2.3 Application Curve

**Figure 8. Level-Translation of a 2.5-MHz Signal**

## 10 Power Supply Recommendations

During operation, ensure that  $V_{CCA} \leq V_{CCB}$  at all times. During power-up sequencing,  $V_{CCA} \geq V_{CCB}$  does not damage the device, so any power supply can be ramped up first. The TXB0102 has circuitry that disables all output ports when either  $V_{CC}$  is switched off ( $V_{CCA/B} = 0$  V). The output-enable (OE) input circuit is designed so that it is supplied by  $V_{CCA}$  and when the (OE) input is low, all outputs are placed in the high-impedance state. To ensure the high-impedance state of the outputs during power up or power down, the OE input pin must be tied to GND through a pulldown resistor and must not be enabled until  $V_{CCA}$  and  $V_{CCB}$  are fully ramped and stable. The minimum value of the pulldown resistor to ground is determined by the current-sourcing capability of the driver.

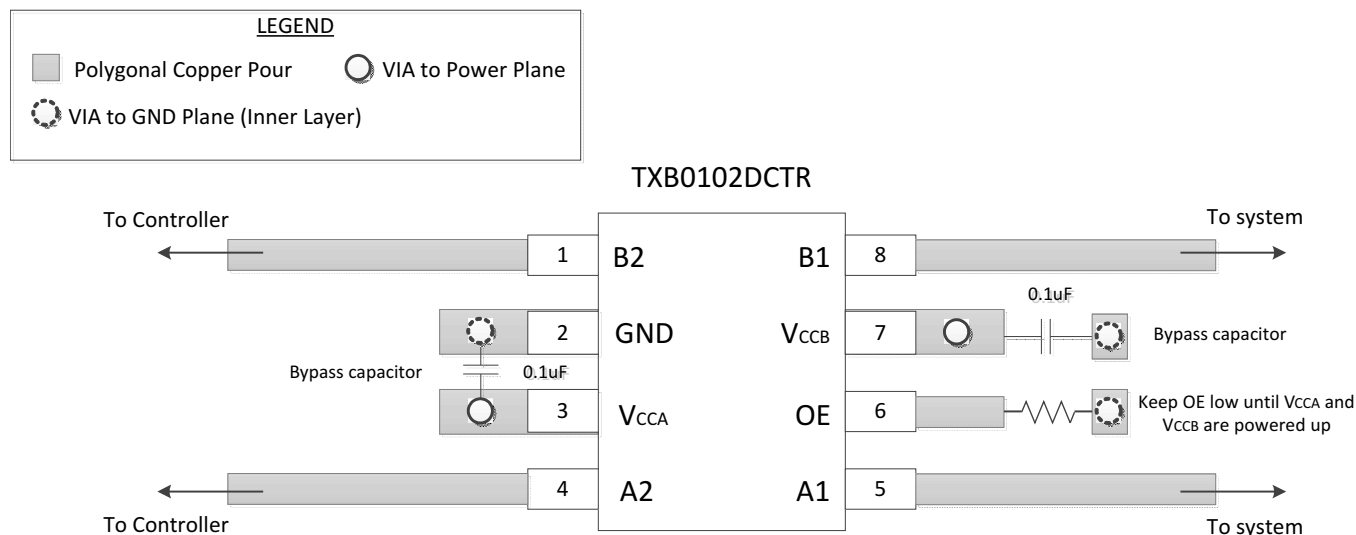

## 11 Layout

### 11.1 Layout Guidelines

To ensure reliability of the device, following common printed-circuit board layout guidelines is recommended.

- Bypass capacitors should be used on power supplies. And should be placed as close as possible to the  $V_{CCA}$ ,  $V_{CCB}$  pin and GND pin.
- Short trace lengths should be used to avoid excessive loading.
- PCB signal trace-lengths must be kept short enough so that the round-trip delay of any reflection is less than the one shot duration, approximately 10 ns, ensuring that any reflection encounters low impedance at the source driver.

### 11.2 Layout Example

**Figure 9. TXB0102 Layout Example**

## 12 Device and Documentation Support

### 12.1 Documentation Support

#### 12.1.1 Related Documentation

For related documentation see the following:

*A Guide to Voltage Translation With TXB-Type Translators*, [SCEA043](#)

### 12.2 Trademarks

NanoFree is a trademark of Texas Instruments.

All other trademarks are the property of their respective owners.

### 12.3 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

### 12.4 Glossary

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

## 13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

## PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

<sup>(6)</sup> Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties.   - B. This drawing is subject to change without notice.
  - C. Publication IPC-7351 is recommended for alternate designs.
  - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
  - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

## IMPORTANT NOTICE FOR TI DESIGN INFORMATION AND RESOURCES

Texas Instruments Incorporated ("TI") technical, application or other design advice, services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using any particular TI Resource in any way, you (individually or, if you are acting on behalf of a company, your company) agree to use it solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources.

You understand and agree that you remain responsible for using your independent analysis, evaluation and judgment in designing your applications and that you have full and exclusive responsibility to assure the safety of your applications and compliance of your applications (and of all TI products used in or for your applications) with all applicable regulations, laws and other applicable requirements. You represent that, with respect to your applications, you have all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. You agree that prior to using or distributing any applications that include TI products, you will thoroughly test such applications and the functionality of such TI products as used in such applications. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

You are authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING TI RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY YOU AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

You agree to fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of your non-compliance with the terms and provisions of this Notice.

This Notice applies to TI Resources. Additional terms apply to the use and purchase of certain types of materials, TI products and services. These include; without limitation, TI's standard terms for semiconductor products (<http://www.ti.com/sc/docs/stdterms.htm>), [evaluation modules](#), and [samples](http://www.ti.com/sc/docs/sampterm.htm) (<http://www.ti.com/sc/docs/sampterm.htm>).
